

Aqeri launches next generation rugged products in Aqeri mini-series

Aqeri, Swedish producer of ruggedized computer and communication equipment for extreme environments, introduces next generation of in-house developed products in mini format. The products are designed for the toughest possible environments and are suitable where space is limited. A typical scenario is deployed vehicles where space and weight is critical. They can also be mounted in a 19" rack single or together in pairs, as well as stand alone or on a wall.

The products launched are two different Routers, a Video Matrix Switch, a NAS (Network Attached Storage) and a VoIP Gateway Router. The width is half 19" and height is 1,5U (NAS is 3U). More information and technical details is to be found on Aqeri's homepage: www.aqeri.com.

Aqeri's next generation fully rugged mini products will be presented September 15-18 at DSEi in London, stand N2-310 in Swedish Pavilion.

CEO's comments;

"Modern defense systems tends to harbor more and more combined functions. Hence they become more and more complex. With this new series of advanced apparatus, Aqeri once again meets customer requirements for small, powerful, high-quality and cost-effective products."
